Cold Regions Science and Technology 28 (1998) 207

cold regions science and technology

Contents Volume 28 (1998)

Research Papers

Particle-in-cell and finite difference approaches for the study of marginal ice zone problems
Z.J. Huang and S.B. Savage 1

Numerical simulations of frazil ice dynamics in the upper layers of the ocean
U. Svensson and A. Omstedt 29

Analysis of visual data from medium scale indentation experiments at Hobson's Choice Ice Island
R.E. Gagnon 45

Pack ice convergence measurements by GPS–ARGOS ice beacons
S.J. Prinsenberg, G.A. Fowler and A. van der Baaren 59

A portable capacitance snow sounding instrument
M.Y. Louge, R.L. Foster, N. Jensen and R. Patterson 73

A Gibbs thermodynamic potential of sea ice
R. Feistel and E. Hagen 83

Sediment entrainment into ice via suspended ice crystals
K.J. Eidsvik 143

Medium-scale indentation tests on sea ice at various speeds
D.S. Sodhi, T. Takeuchi, N. Nakazawa, S. Akagawa and H. Saeki 161

Heat stability analysis of embankment on the degrading permafrost district in the East of the Tibetan Plateau, China
D. Li, Z. Wu, J. Fang, Y. Li and N. Lu 183

Antifreeze thermal ice core drilling: an effective approach to the acquisition of ice cores
V. Zagorodnov, L.G. Thompson, J.J. Kelley, B. Koci and V. Mikhalenko 189
